## Summary

1	Task 1	3
---	--------	---

# 1 Task 1

Often, a web designer wants a change to happen when a user clicks on a screen object or moves the mouse over it. JavaScript can make changes to the HTML elements.

Enter and run this script:

```
<!DOCTYPE html>
<html>
<body>
<h1>Change an HTML element</h1>
<p id="msg">Now you see me.</p>
<button type="button"
onclick="document.getElementById( 'msg' ).innerHTML = 'Gone!'" >
Click Me!</button>
<button type="button"
onclick="document.getElementById( 'msg' ).innerHTML = 'Back again!'" >
Bring me back!</button>
</body>
</html>
```
