2017

Summary

1	Task 1	3
1.1	Explain how you ran this script:	3

1 Task 1

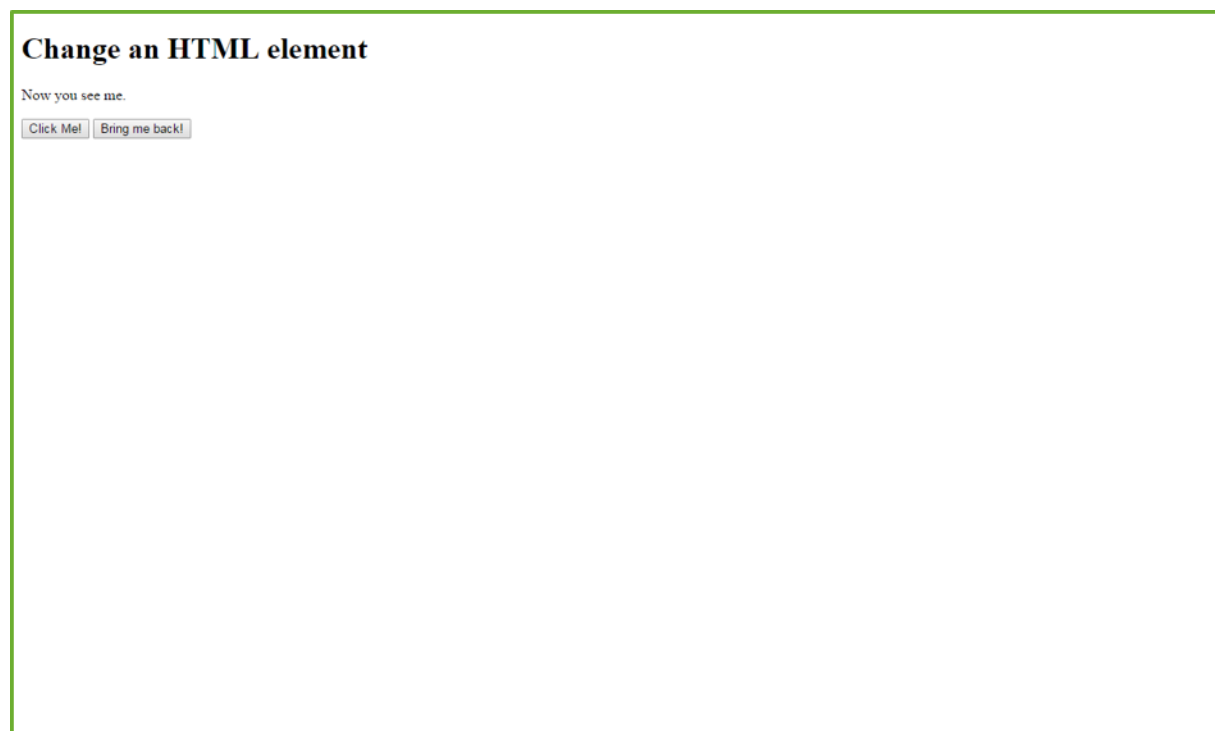

Often, a web designer wants a change to happen when a user clicks on a screen object or moves the mouse over it. JavaScript can make changes to the HTML elements.

Enter and run this script:

```
<!DOCTYPE html>
<html>
<body>
<h1>Change an HTML element</h1>
<p id="msg">Now you see me.</p>
<button type="button"
onclick=document.getElementById( 'msg' ).innerHTML = 'Gone!' ">
Click Me!</button>
<button type="button"
onclick=document.getElementById( 'msg' ).innerHTML = 'Back again!' ">
Bring me back!</button>
</body>
</html>
```

1.1 Explain how you ran this script:

This script was copied into a HTML document, and opened into a web browser.
When the script ran it gave the following output:

The web page took the code entered, ran it, and produced this output.
